TITLE: Development of a Driver License Application Management Information System  
Stage II

DATE: November 2005

AUTHOR(S): Eric A. Chapman

REPORT NUMBER: 218

SUMMARY:

This project involved creating a prototype off-line driver license (DL) application management information system (MIS) that captured and stored extensive information on the driver license application process. From this prototype database, example reports were generated to demonstrate the feasibility of constructing a fully functional off-line DL application MIS that would be able to provide descriptive measures and statistical data related to the driver licensing process.

In the event that Department of Motor Vehicles' management decides to proceed with the creation of the proposed database, funding from the California Office of Traffic Safety would be requested for the next stage, Stage III, of the project. The implementation schedule for Stage III is provided in this report. Specifically, Stage III will involve addressing and correcting problems with the application transaction source data that were identified in this report and constructing a fully functional DL application MIS.
